

Improved safety for cylindrical GUPM

New locking protective cover 1025

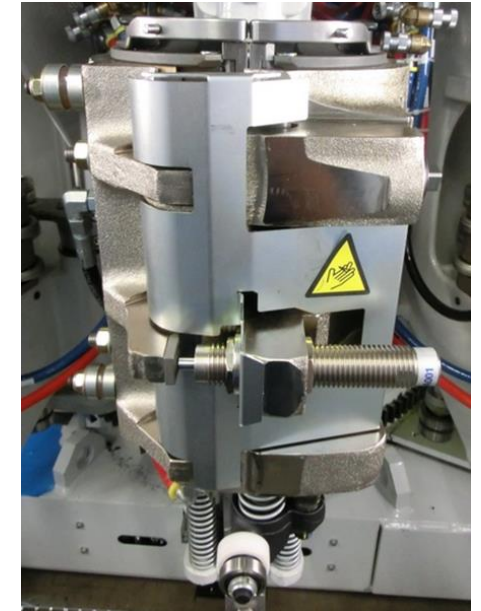

VALUE AND BENEFITS

- Quick and easy to assemble.
Using two threads existing M12 located right on the square.
- Shape similar to the current case.
With housing in place, it is permanent protection for the operators.

DESCRIPTION

- The unit of the cylindrical mold carrier and Universal Series 2, comprises a casing which protects the operator during closing of the lock.
- At the end of its life, the protective casing may break at the only attachment point located on the damper of the mould-holder unit.
- Through this improvement we to increase the robustness of the housing, and indirectly, to improve the security level.
