

Increase equipment efficiency

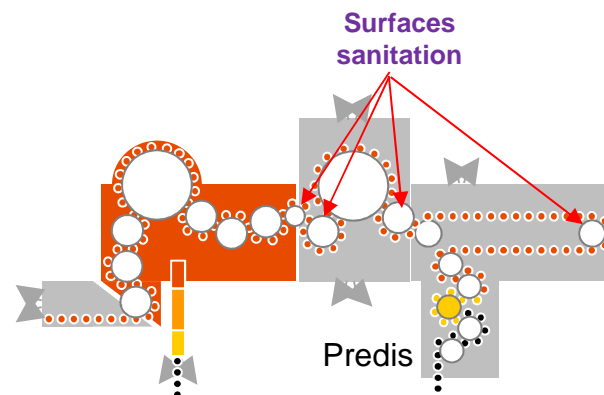

Sanitation cycle reduction

VALUE AND BENEFITS

- Improved cycle time duration to **less than 10min**
- Improvement achieved thanks to activities overlapping between the different zones and optimization of spraying / drying phases with alcohol
- No compromise at all on global aseptic performance
- Less downtime during format change over or during operator intervention in the blowmolder

DESCRIPTION

- Alcohol treatment of preforms/bottles grippers, exit star wheel, blowing bell and top of mold.
- UV treatment of spindles
- Full automatic cycle launched automatically after operator intervention
- Cycle time currently lasting **approx. 25min**

Value: Efficiency

Equipment: Blower Universal, Matrix with Predis

Catalogue code: 1046
