

Neck finish under control

Neck ventilation at the end of the oven

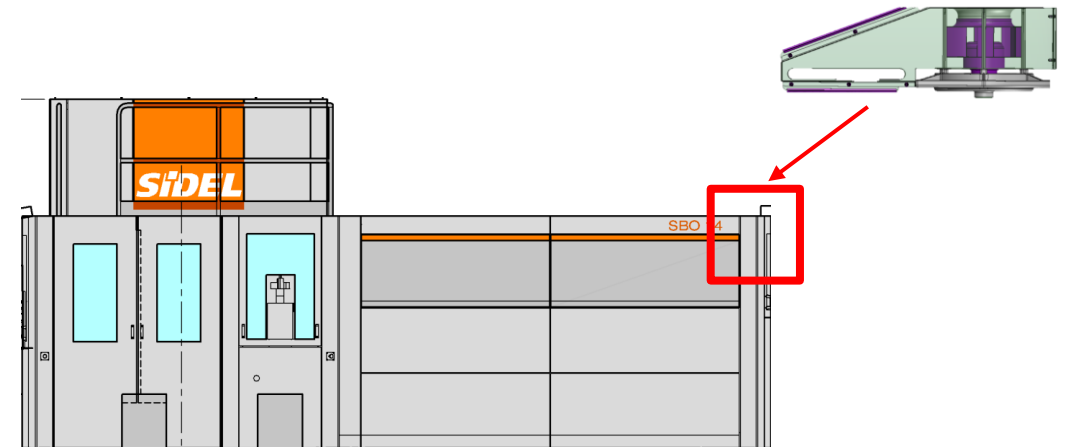

VALUE AND BENEFITS

- Additional cooling of the preform neck finish with blown air.
- Reduce the risk of having neck finishes overheating.
- In some cases, it can ease the production of very technical bottles.

DESCRIPTION

- A centrifugal fan to be installed at the end of the oven, in the 180° bend.
- Plugged on the spindle chain tensioner shaft.
- Not suitable for oven equipped with neck indexing system.
