

Easy Settings, Highest Reliability, Simplified Maintenance

AA032 – Contactless Vacuum Drum

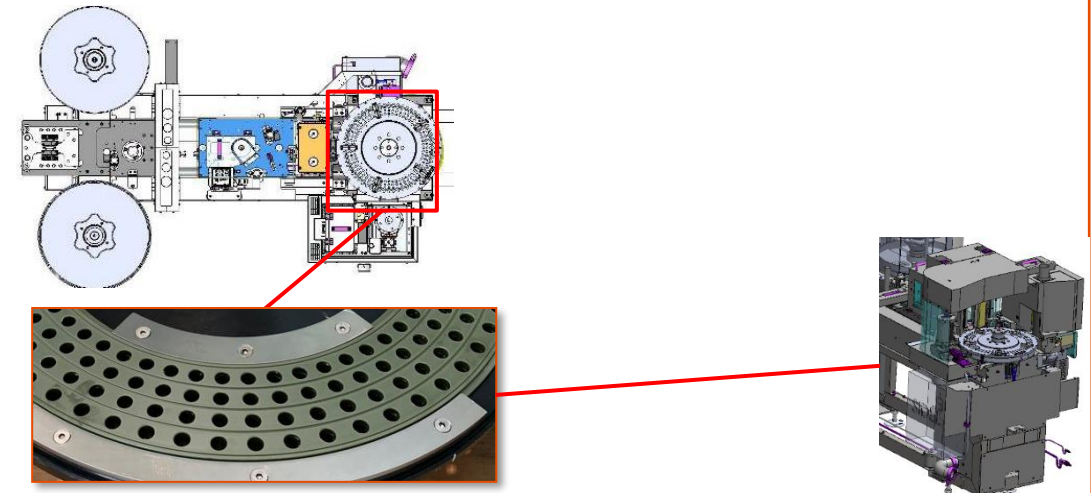

VALUE AND BENEFITS

- The vacuum distributor in a fix position with calibrated spacer allows to avoid contact and friction; 0,1 mm of gap can ensure a controlled vacuum leakage and the drum motor torque decrease of 70%.
- Greasing interval decrease up to 70%, this will decrease the grease contamination on the vacuum channel and the cleaning interval on this area
- Avoid vacuum circuit contamination with grease.

DESCRIPTION

- New vacuum distribution plate (green plastic plate) design
- The plate is completely compatible with previous one and grants:
 - *less contact surface area;*
 - *reduced friction and wear between parts;*
 - *no automatic grease hole obstruction;*
 - *greater uniformity in the grease distribution.*

Value: Efficiency, Maintenance

Equipment: SSC labellers (rollfed module), Evodeco
