

EOL047 - Product quality: better quality end product

Efficiency: produce more

New gentle product rotation from above pneumatically cushioned; can replaces or flanks the rotation from the bottom in the in-line inlets

Value and benefits

- **Product Quality**

Product impact reduced and gentle packs management during the rotation phase.

- **Efficiency**

The system is designed to work with all kind of packages

- **Flexibility**

Automatic / manual adjustments.

- **Maintenance**

Easier and faster maintenance procedure

Description

- The system has a non-invasive structure from above, that supports the cushioned pneumatic components of the rotation. It adapts to the different heights required, works with 2 or 4 rotations, is pneumatically cushioned and is fixed on the layer formation table. It replaces the rotation from the bottom of the in-line inlets with doser and divider. However, is possible to keep the old rotation system present, bypassing it.
- All type of product can be processed and the format-change / adjustments can be automatic.
- The device is installed above the layer formation table, allowing an easy and safer maintenance operation

Value: Product quality Efficiency
Equipment: Palletize Liner IBU
