

Improve the reliability and product safety

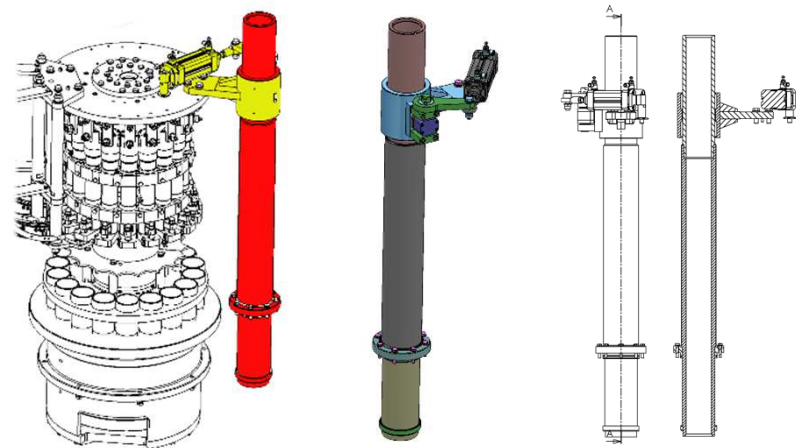

Capper anti-vibration column

VALUE AND BENEFITS

- Fewer vibrations improve the capping alignment of the piston – bottle, which thereby reduces the possibility of bottles with capping defects
- Reduction in wear of the capping components
- 1 cap ever 25.000 with Ultraclean capping machine
- 1 cap ever 20,000 with sloping surface capping machine
- Increase reliability / improve process quality

DESCRIPTION

- The column, which is made completely of stainless steel, is fixed to the base of the filling machine and is connected to the body of the capping machine by means of a plate and a pneumatic piston tightened in a sliding ring
- The anti-vibration column reduces the vibrations of the capping machine, thereby improving the quality of the capping process

Value: Efficiency

Equipment: Fillers Eurostar RAA and HS REV, Europa RAC, Starlight RBC

Catalogue code: HS010
