

Eliminate explosion risk in the plant

Hydrogen Gas Extraction System

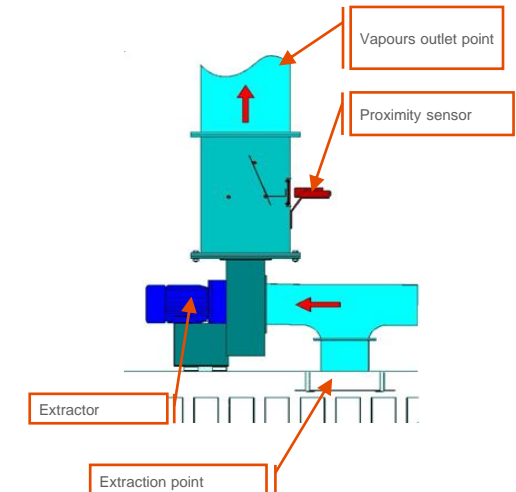

VALUE AND BENEFITS

- Prevent the development of highly explosive gas (hydrogen)
- A safety device prevents the risk of gas accumulation inside the machine
- The gas is conveyed outside the plant by means of proper piping (customer's supply)

DESCRIPTION

- A flameproof fan extracts the generated hydrogen from the machine
- A proximity sensor continuously checks the quality of the aspiration flow
- If the aspiration flow level is too low, an alarm immediately stops the machine
- This upgrade is mandatory if the customer uses aluminum labels in its production

Value: Safety & Ergonomy

Equipment: Bottle washer - Oceano- NDE- Atlantic- Hydra - HD
