

Flexibility and stability at pasteurizer infeed and outfeed

VALUE AND BENEFITS

- Flexibility due to direct transfer of the bottles between conveyors and main belt.
- Improved stability of the bottles during transfer.
- Improved design of the transfer combs.
- improved combs robustness and lower maintenance costs.
- Avoid manual activities for removing product at the infeed/outfeed of the pasteurizer. (no more "dead plate")

DESCRIPTION

- Installation of a Motorized transfer belt instead of the static transfer.
- Replacement of the Static combs with the new design ones.
- Applicable on plastic belts and stainless steel belt.

Value: Efficiency, Maintenance, Flexibility, Safety & Ergonomy
Equipment: SW, SWD, SL, SLD
